

Isolated H2D, verified local NUMA pinned sources

Two 9-MiB fetches

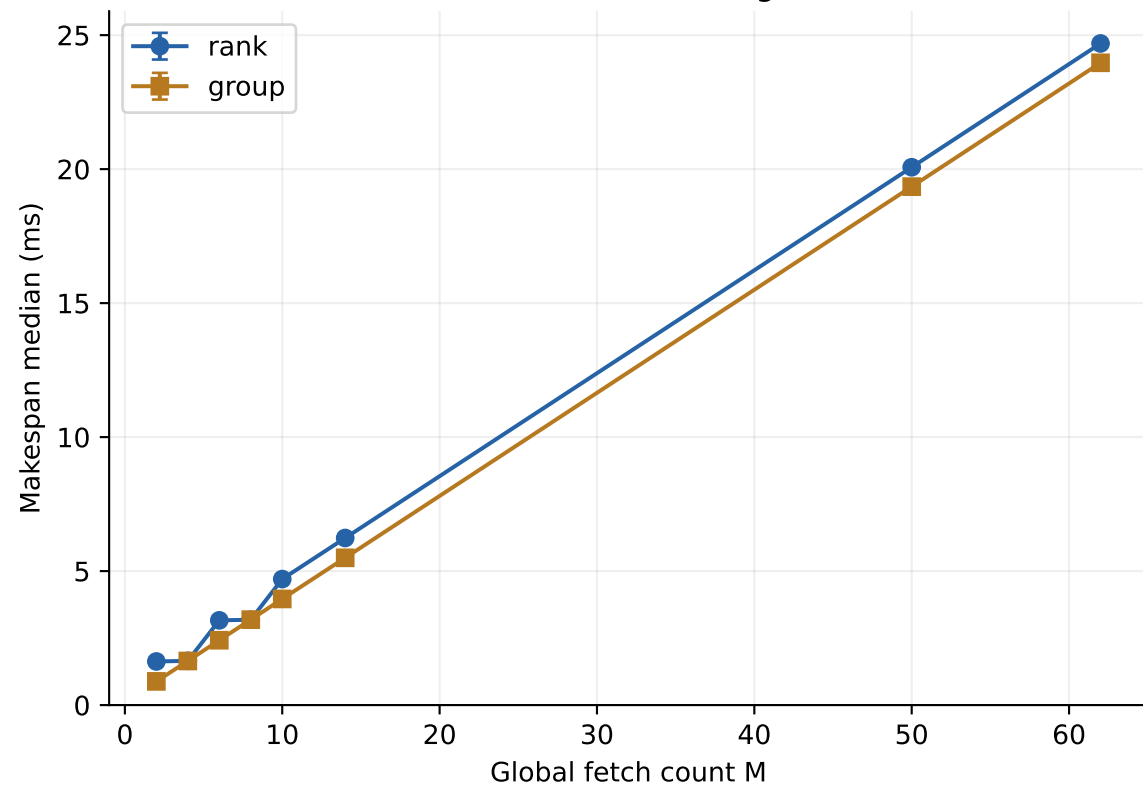

Six fetches; physical GPU order 0,1,4,5

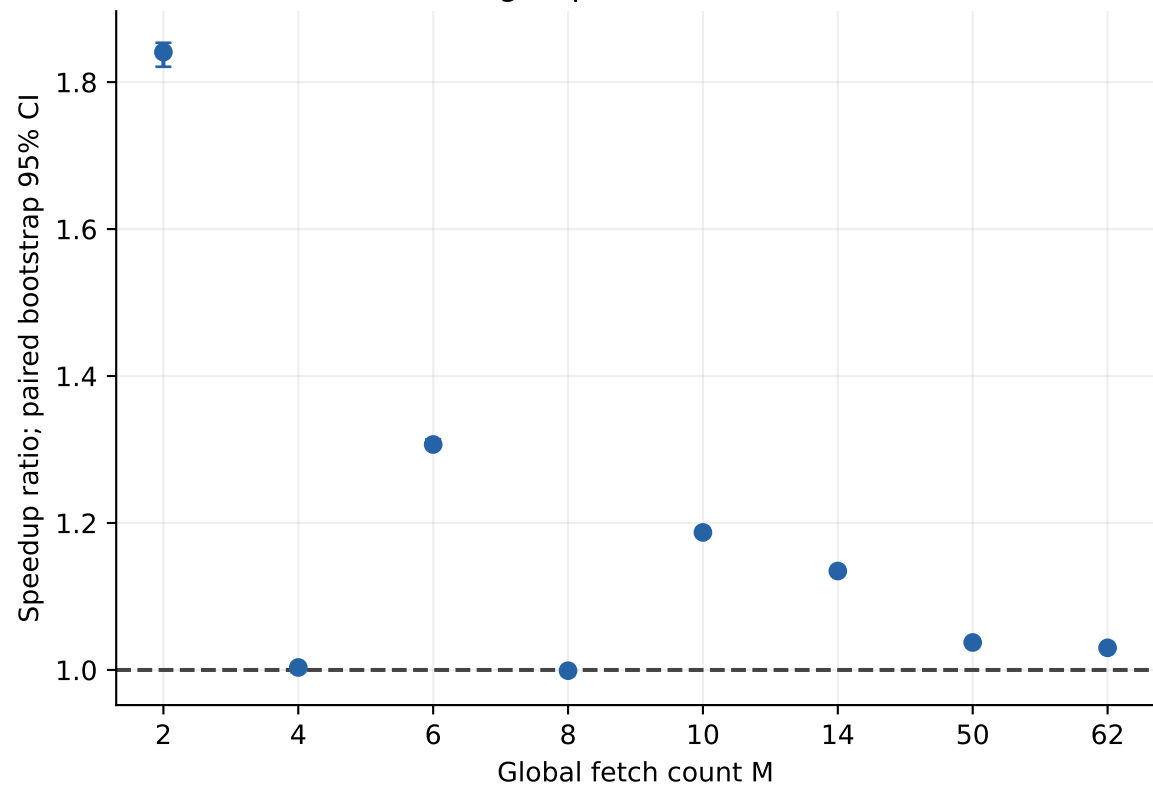

30 samples per cell after 5 warmups; randomized repeat blocks. Boxes: quartiles; lines: medians; dots: outliers.

One copy stream per GPU; M=4 and M=8 are negative controls

Miss-count scaling

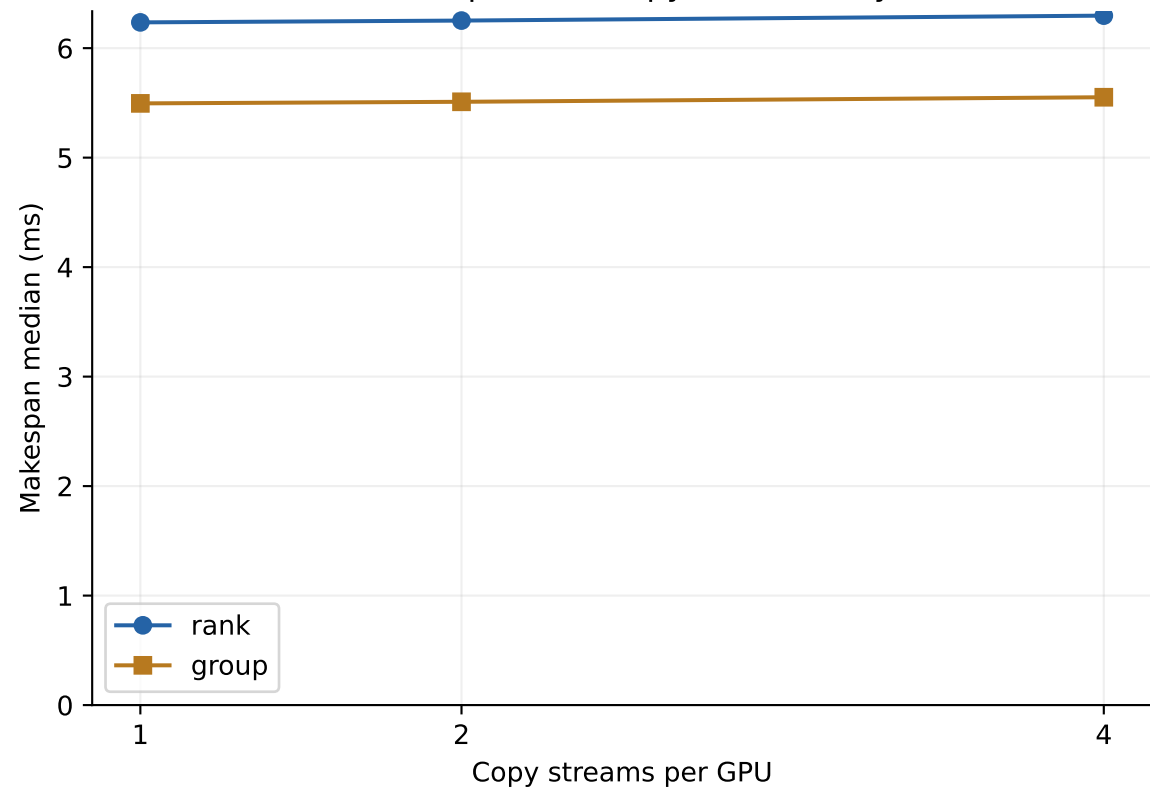

Rank/group ratio of medians

Remote pages verified; G2G overlap is a separate diagnostic

M=14: per-GPU copy concurrency

M=6: source/overlap sensitivity
